from your  
**Procera**  
crown

Ask your dentist if Procera AllCeram is the  
right choice for your smile.

the smile of a  
lifetime

the smile you've always wanted can be  
yours with Procera® AllCeram crowns

# beauty

**W**hen dental restorations contain metal, they often have a flat, dull appearance and a dark line between the crown and the gum where the metal is visible. Procera crowns are completely metal-free. The core is made of a tooth-colored material that is translucent. As light passes through it, a Procera crown takes on a vital, natural-looking beauty.

# biocompatibility

**T**he metal-free materials in a Procera crown are biocompatible, that is, compatible with living tissue. Thus there is little risk of allergic reactions or trauma to the soft gum tissue with Procera. In addition, the surface of a Procera crown is less abrasive than other porcelains, providing the smooth feel of natural teeth.

# strength

**H**owever lifelike a crown may be, it has little value if it doesn't last. A Procera crown is made through a unique computer-assisted design and manufacturing process that yields a high level of precision in the fit of the crown. When precise fit is combined with the material properties of Procera, the result is a crown of outstanding strength and durability.

PROCERA®

{ A product of advanced technology, Procera® AllCeram makes it possible to restore broken or worn teeth with crowns that are stunningly lifelike. }
